EDUCATION

Texas A&M University

Bachelor of Science in Computer Science, Minor in Cybersecurity

College Station, TX

Aug. 2024 – May 2028

EXPERIENCE

Software Engineering Intern

May 2026 – August 2026

USAA

Plano, TX

- Owned development and deployment of **20+** production enhancements for USAA's **React 18** Auto Digital First Notice of Loss (DFNOL) application, supporting a **member-facing** claims platform processing **600K–670K auto claims** annually through **Guidewire ClaimCenter**
- Engineered complex multi-step claim workflows by diagnosing **React Context** state synchronization issues, ensuring dynamically added **claim entities** (vehicles, passengers, drivers, and incident details) propagated correctly across downstream review and **submission flows**
- Resolved production reliability issues by **tracing API payload** inconsistencies between **React** and **Java Spring Boot** services, eliminating **submission failures** caused by invalid claim data
- Implemented data-driven **form validation** using Formik and Yup across **35+ claim workflow** sections, enforcing conditional required fields and streamlining the digital claim completion flow for members

Research Intern

June 2023 – August 2023

The University of Texas at Dallas

Richardson, TX

- Developed a text simplification tool using Google's **BERT** model **summarizing complex input** with over **85% accuracy** in summarizing long text
- Fine-tuned **NLP models** in TensorFlow, **reduced** training time by **25%** and improve classification accuracy by **10%**
- Collaborated with a 5-person research team to integrate ML prototypes into deployable **software tools**, presenting findings in lab meetings and contributing to **accessibility-focused** projects

PROJECTS

Atlas (HackRice, ACC) | *Next.js, Node.js, Express.js, MongoDB, React, Tailwind*

September 2025

- Built the frontend interface in **Next.js/React** with **Tailwind**, designing a responsive search experience that integrates **geolocation** and real-time product data
- Engineered a **Node.js** backend with secure API authentication (**HMAC for Walmart, OAuth2 for Kroger**), geolocation filtering via the **haversine formula**, and **MongoDB** caching to reduce redundant queries
- Created a clean, intuitive UI to present price and stock comparisons across retailers, improving clarity and ease of use for shoppers

SimplyLearn (2nd place - Build4Good Hackathon) | *Python, Flask, HTML, Notion*

March 2025

- Built a **web application**, converting user learning goals into **structured, personalized** roadmaps, integrating with **Notion API** for seamless tracking and structure
- Developed backend logic in **Flask** and **Python**, leveraging **Gemini API** to generate automated to-do lists and step-by-step **learning plans**
- Implemented input validation, **error handling**, and API key management, ensuring a secure and smooth user experience, earning **second place** at the Texas A&M **TACS Build4Good Hackathon**

TAMUFlight (TAMUHack) | *C++, HTML, CSS, JavaScript, Node.js*

January 2026

- Built a real-time flight disruption dashboard using **React** and **Mapbox**, visualizing live flight and weather data for **20–50** aircraft in the a user-specified region
- Developed backend optimization services in Python **FastAPI** using **Dijkstra's** algorithm to generate weather-aware rerouting for active flights
- Implemented **cache-first** API architecture, GPU hardware detection, and AI-generated flight explanations, enabling scalable real-time route analysis during severe weather events

TECHNICAL SKILLS

Languages/Tools: Java, Python, C++, SQL, JavaScript, HTML/CSS, React, Node.js, Flask, TensorFlow, PyTorch, Git, Github, Gitlab

EXTRACURRICULAR

Clubs: Aggie Coding Club, Texas A&M Computing Society, SASE, TAMUHack

Interests: Volleyball, Baseball, Basketball, Music, Videography, Photography, Traveling, Sports
